

CONSTRUCTION UPDATE

June 19, 2020
Update 60

Turbine installation

With commissioning underway works the project continues to focus on the installation of turbines.

The project is nearly two thirds of the way through installation with 94 turbines fully installed, with installation complete in the south and west section of the wind farm. We also are focussing on completing the east, south and north substations.

With the project being energisation all installed infrastructure, sub-stations, powerlines, and underground cabling shall now be considered electrically **ENERGISED** and **ALIVE**.

There also may be some minor traffic management in place around the project site as we rehabilitate some the public roads being used by the project.
