

CONSTRUCTION UPDATE

July 3, 2020
Update 61

Turbine installation

The project has now energised the west, south and east substations, which will enable turbines in these areas to be commissioned.

Installation of turbines remains a focus, with 97 now fully installed. We have now commissioned 20 turbines, with a further 20 turbines in the process. It is important to note we are still only commissioning one turbine at a time.

With the project being energised all installed infrastructure, sub-stations, powerlines, and underground cabling shall now be considered electrically **ENERGISED** and **LIVE**.

There also may be some minor traffic management in place around the project site as we rehabilitate some the public roads being used by the project.

Construction updates will now be issued monthly, with any special construction activities being communicated on an adds need basis, if you require any further information call 1800 753 730.
