STATUS FINAL	APPROVED PMarriott

Notes:

- Onsite car parking is anticipated to include allowance for the peak number of vehicles that will be located on site, which may include up to 15 staff vehicles, 4 maintenance and light vehicles, 3 light vehicle deliveries.
- The site will be accessed off Stockyard Hill - Wangatta Road via an existing access point in the north east corner of the site. It is not anticipated that this access will be required to be upgraded, however a traffic management plan (anticipated to be required as a condition of a planning permit) will address this access point to ensure safe access.
- Onsite treatment of sewerage will be implemented through the establishment of self contained septic tanks in conjunction with a potable amenities building to be established within the crushing and screening area. The establishment of septic tanks installed and operated in accordance with the Code of Practice Onsite Wastewater Management, EPA Publication number 891.3 February 2013.
- No landscaping is proposed on the quarry site during its operation as it will be operating within the context of a larger construction site of the Stockyard Hill Wind Energy Facility. Following the completion of the WEF, the quarry site will be rehabilitated back to a landscape form which is consistent with the surrounding environment.
